

Hana FAQ

.mdd

Ergonomics

- **Does the pod have certificate of acoustics?**

Yes the pod is made in Certificate Sonic Technology, which is also used in acoustic panels. We are currently working on a separate standard in the field of pod acoustics.

- **What are the acoustic properties?**

The wall fillings have the highest class of acoustics - A. The soundproofing properties provide noise level reduction of 37 dB. (the so-called, acoustic insulation).

Structure

- **What elements does the Hana pod consist of?**

Hana pod consists of two upper tops (internal and external), two lower tops (internal and external), worktop and glass door.

- **What materials are used to build the construction?**

The frame is made from MDF, a chipboard and HDF. The whole construction is filled with acoustic material. Upper and lower tops – lacquered MDF.

- **Does the pod have a floor?**

Yes, the pod has the floor-covering.

- **Where is the light switch?**

The light works on the motion detector which switches the light and the fans on.

- **What are the ventilation parameters?**

- 2 fans- intake and exhaust
- Volume 14 dB, efficiency 90 m³/h

Assembly

- **How long does it take to assemble the pod?**

The assembly takes approx. 2 hours.

- **How many people are required to assemble the pod?**

It requires two people to assemble the pod.

- **Does the room, where the pod is going to be assemble, have to be significantly higher?**

The recommended height of the room is at least 2,5 meters.

- **Does the pod have to be assembled to the floor?**

No, the pod is freestanding.

- **Is the door universal and can be assembled as left-hand or right-hand door?**

No, the door can only be assembled on the right-hand side.

- **Is an electrician required to plug in the pod?**

No, it is enough to plug the pod to the standard socket.

- **Where is the electrical connection located?**

The power cord comes out of the lower top.

- **Is the pod adapted to the 110V voltage in the USA?**

Yes, it automatically adapts to that voltage.

- **Can the already assembled pod be taken into pieces and reassembled in a different place?**

Yes, it is possible to assemble the pod repeatedly.

- **Can the Hana pod be moved?**

Yes, but for safety reasons it is recommended that it is done by at least 4 people.

Transport

- **Does the Hana pod come in piece?**

No, it does not come in one piece, it consists of elements that can be easily moved to every room. The weight of the pod is 170 kg.

- **How do we pack our Hana pods?**

Hana pod's components are packed in the wooden crate. All the elements are carefully secured and fixed so they do not move during the transport.

- **What are the dimensions and weight of the crates?**

Dimensions: 2185 × 1415 × 800 mm.

Weight: 315 kg.
